

(2) Watching video files which are not supported by Windows Media Player by default  
Examples: file extensions of FLV, MOV and MP4

1. Click “Download files what you need” to download files you need.

- ffdshow.exe
- CCCP.exe
- MP4Splitter.ax

Just double click “ffdshow.exe” and “CCCP.exe” to execute these files. On the way, you just click “Next” or other default button to finish it.

2. Setting up “MP4Splitter.ax” file

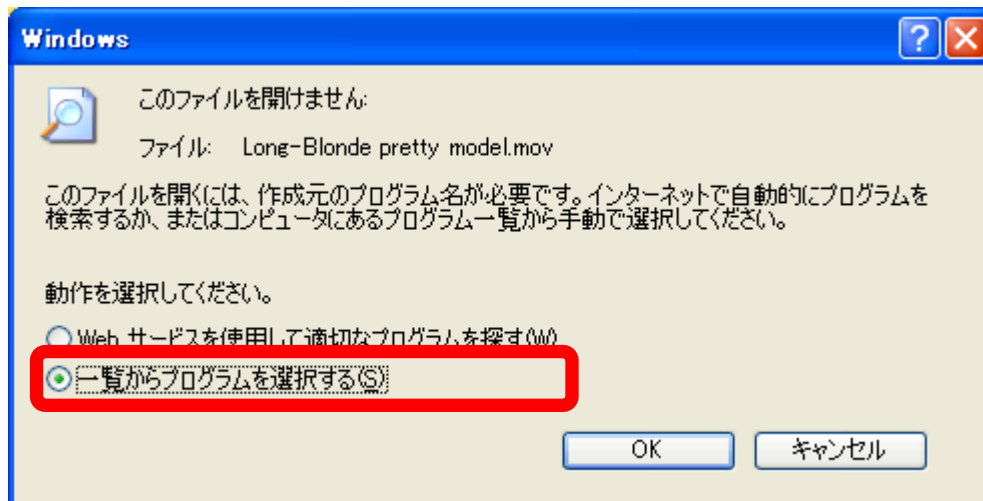

We use “MP4Splitter.ax” file in the folder MP4.

[Step1] You copy “MP4Splitter.ax” file to C:¥WINDOWS¥system32.

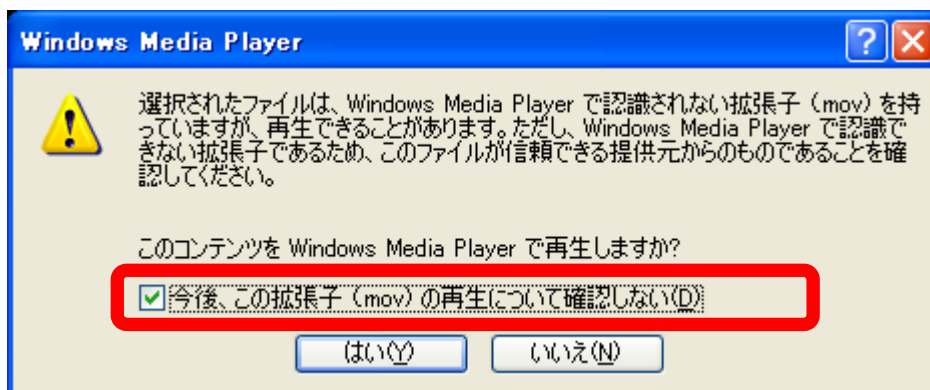

[Step2] From Start menu, you choose “Specify filename and execute” and put “regsvr32 C:¥WINDOWS¥system32¥ MP4Splitter.ax” and then, press “OK”.

3. Set up video files you want to play

If you click the video file you want to play, at first time, you might see the following message. Check your following items marked in red, then click “OK” or “Yes” to finish this.

- (2) Watching video files which are not supported by Windows Media Player by default  
Examples: file extensions of FLV, MOV and MP4

Good luck!!
